

Smart Intercom Delivers a Modern Residential Living in Manhattan

Type of Site:
Apartment building

Project Location:
New York, USA

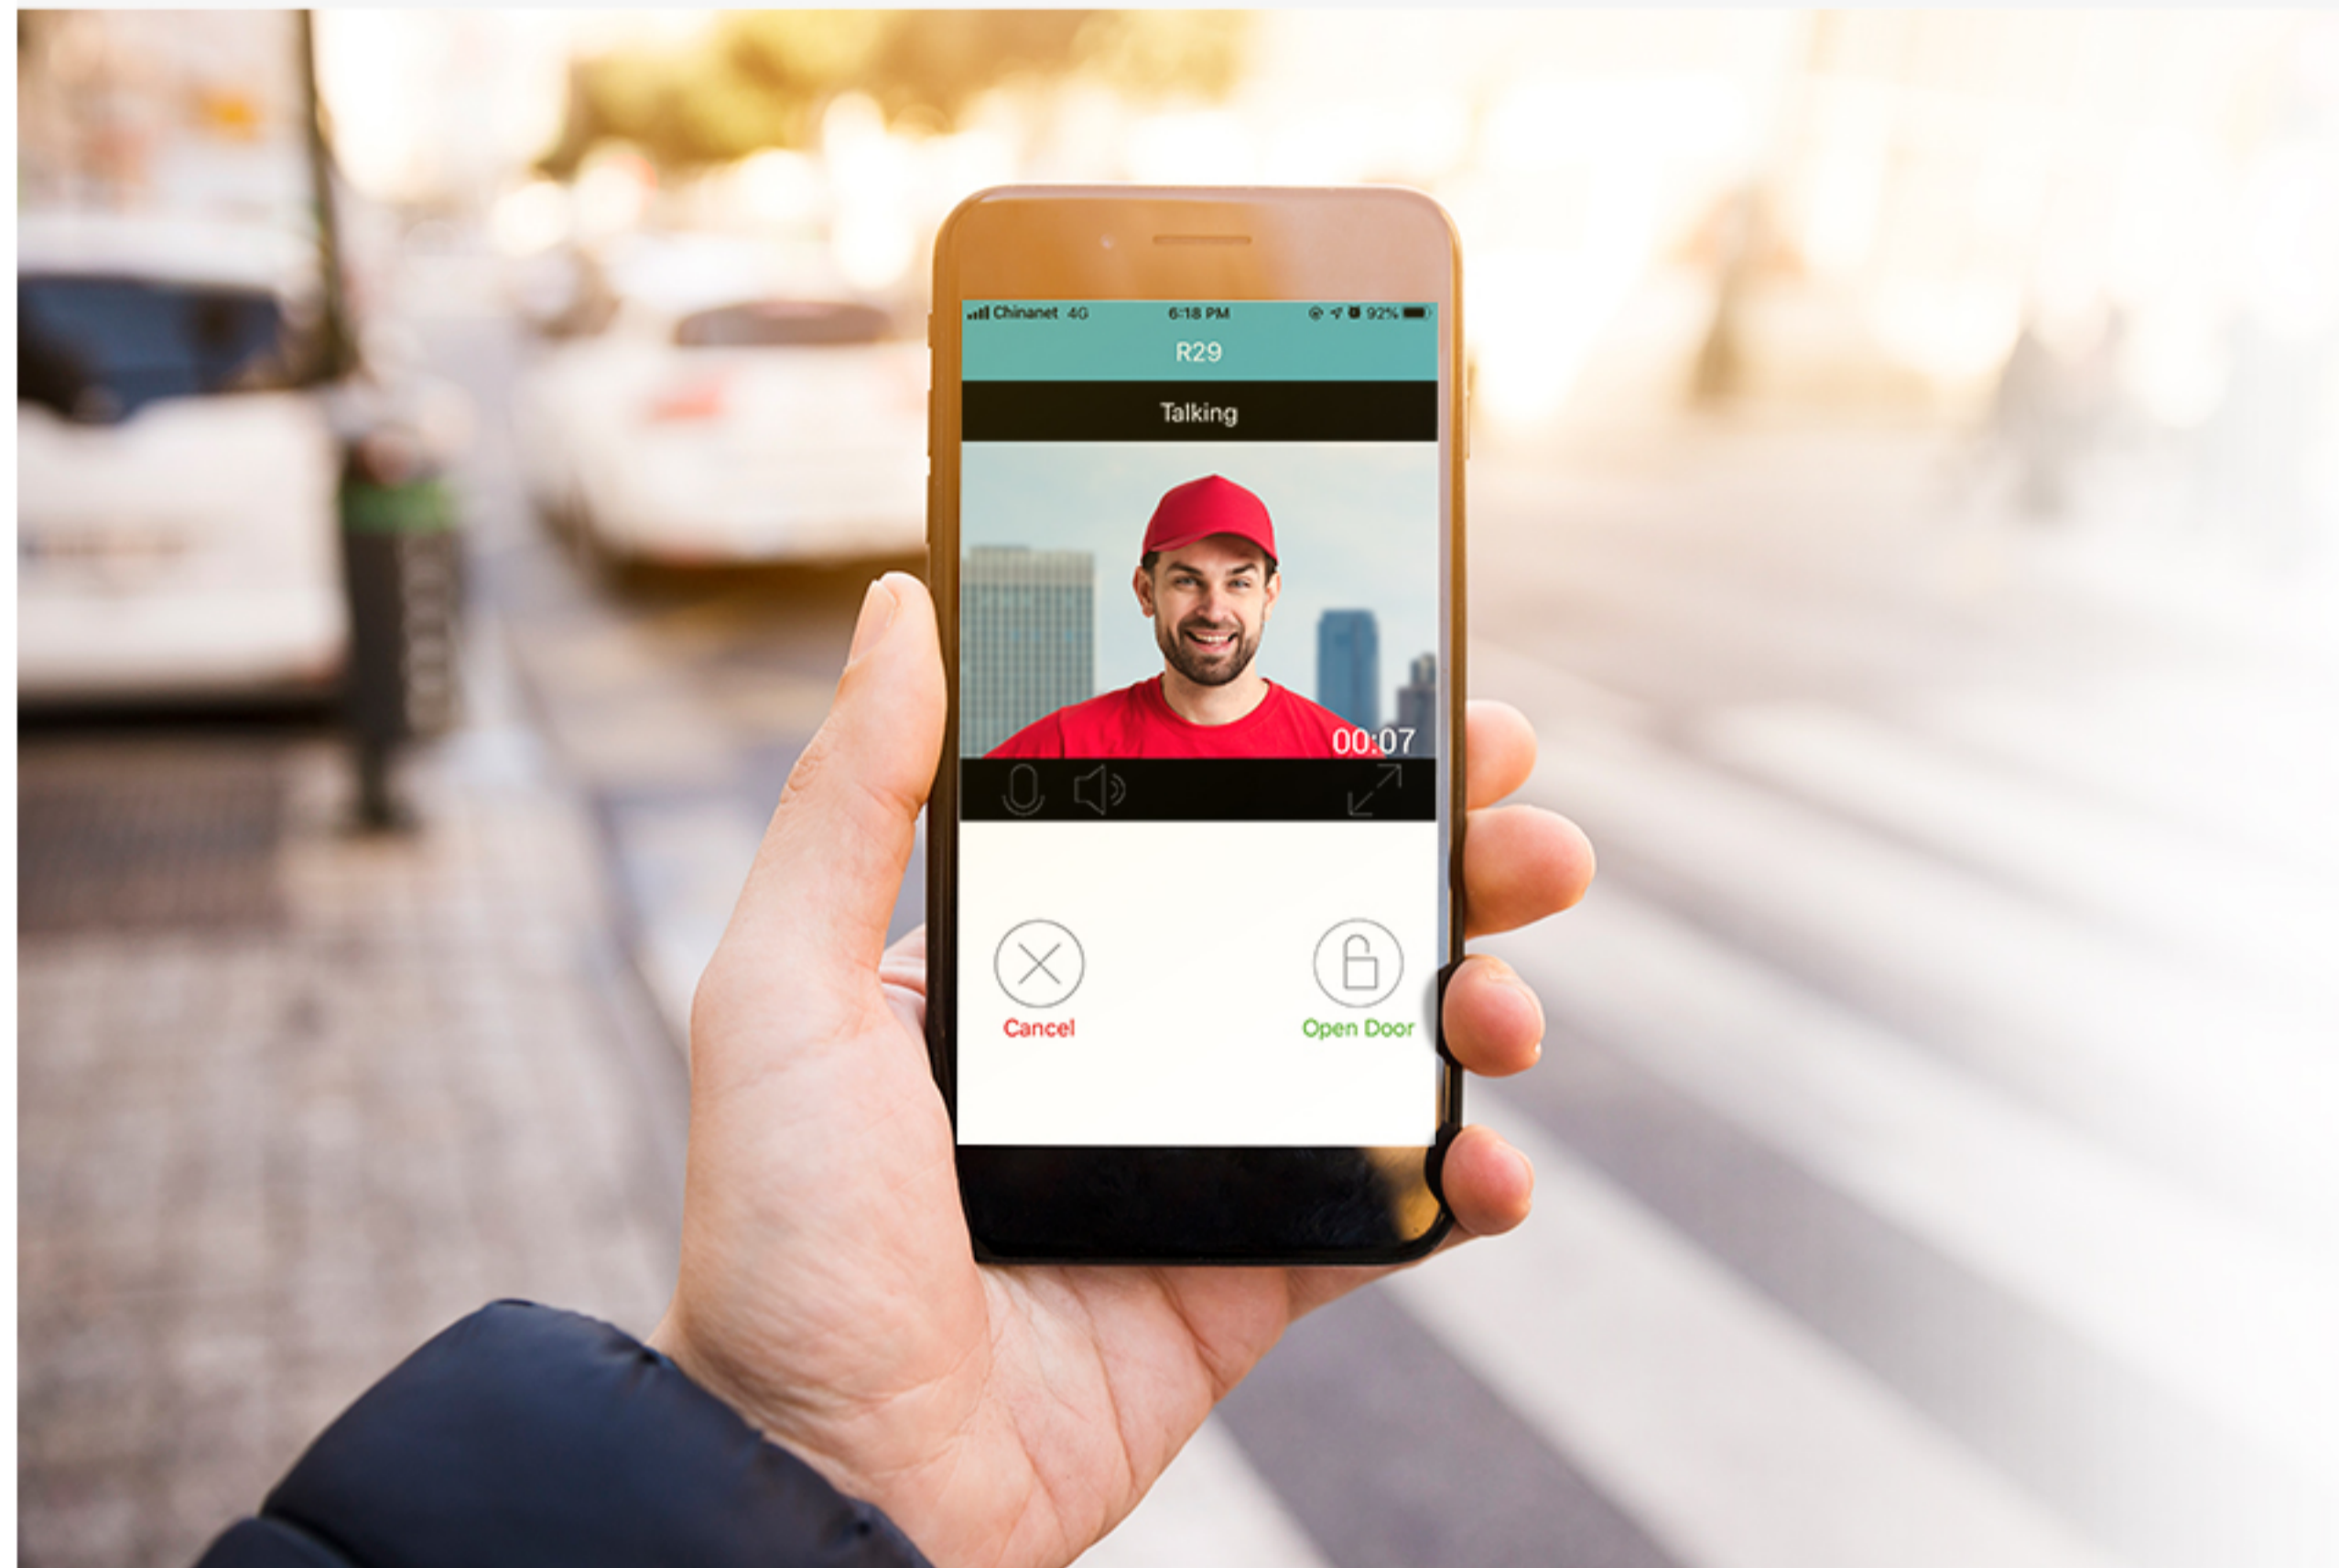

Solution Highlight:
Smartphone-enabled intercom

The Situation

The 54-unit apartment building on the 15 West 75 street of Manhattan, New York required an urgent replacement of its building entry system. The old intercom system at the main entrance was broken, putting the security of the building and its residents at risk. The owner was looking for an advanced and affordable intercom system that meets the residents' need of higher security and more convenience for building entry.

The Solution

Akuvox SmartPlus, a smart cloud-based intercom solution, was proposed, which consisted of a doorphone and mobile intercom apps as the answering units. Akuvox's R29 Android doorphone was installed at the main gate without a glitch. Supporting PoE, it only required one cable to finish the installation. The indoor monitors that usually come with a traditional intercom solution were replaced by Akuvox's mobile intercom app, the SmartPlus App.

The SmartPlus App offers residents immense convenience on the go. Right from their smartphones, they can see and talk to whoever is trying to access the building through live video calling of the app before buzzing them in remotely. They can also create time-limited QR code keys for service people, such as dog walkers and plumbers, for managed property access, an appealing feature allowing residents to plan things in advance.

Akuvox SmartPlus not only streamlined building entry, but also helped the property stand out with a cutting-edge amenity that modern residents are looking for. The R29 smart doorphone supports multiple door entry methods, including RF cards, PIN codes, NFC, Bluetooth and face recognition. Residents can select any option that suits their individual needs or preferences. Visitors can easily look up the apartment number to call on the 7" touch screen and enjoy excellent audio communication with the residents.

The Results

The new intercom system measured up to the building owner's every expectation. From selection to installation, the whole process was fast and easy. He only needed to buy one unit as the doorphone without the need to pay for indoor monitors, which saved him much money. Akuvox SmartPlus also helped deliver a modern residential living that offers residents better video and audio speech quality and great flexibility and mobility through their mobile phones.
